

DIGITALIZATION • ENTERPRISE APPLICATIONS • AI

35 years of enterprise IT, business, industry and domain expertise. Applied to digital solutions tailored to your business goals.

R&R Software designs, develops, delivers and supports enterprise-grade digital solutions for industry-specific business and public administration processes.

Sustainable digital solutions

We adapt proven industry practices and modern technologies to each client's business objectives, processes and operating model.

Long-term partner

We build long-term partnerships on industry and domain expertise, stability and measurable customer satisfaction, proven by clients who have worked with us for decades.

End-to-end solutions across the full lifecycle

From design and development through integration and implementation to long-term operations and continuous enhancement, we act as an accountable and reliable solution provider.

AI-augmented development

We use AI tools to improve development quality and efficiency and, where required, integrate AI or LLM components into solutions while maintaining expert accountability throughout delivery.

Research, development & innovation

Together with our university and technology partners, we explore the practical application of emerging technologies, paradigms and methods and incorporate the results into our digital and AI solutions.

Industry & domain expertise across critical business processes

Utilities & energy

Customer, product and contract management, metering processes, high-volume B2B and B2C billing, and revenue assurance.

ICT & telecommunications

Customer, product and contract management, high-volume real-time transaction processing, high-volume B2B and B2C billing, and revenue assurance.

Banking & financial services

Core-system related development, CRM and sales enablement, data warehousing, and enterprise applications.

Commerce, manufacturing & logistics

ERP, CRM, sales and industry-specific business solutions supporting commerce, manufacturing and logistics processes.

Automotive

ERP/DMS, CRM, sales, mobility and industry-specific business solutions for manufacturers, importers, dealer networks and fleet service providers.

Public administration & public services

E-government, process-driven, institutional and program management solutions.

Proven industry practices, tailored to your operating model

We tailor the industry best practices embedded in our ERP, CRM and BSS solutions to each client's operating processes. The resulting solutions enable governed, predictable and transparent operations with effective control.

Governance

Predictability

Transparency

Control

From business goals to long-term operations

As an accountable solution provider, we cover industry-specific design, technical delivery, and ongoing support and maintenance.

End-to-end solution delivery across the full lifecycle

1

Understand & design

Align business objectives, processes and requirements, and design the technology solution.

2

Develop & integrate

Quality-assured implementation and provider-side testing of applications, data and integrations.

3

Implement

Migrate data from legacy systems or other sources, support user acceptance testing, go-live and handover.

4

Operate & evolve

We support clients as industries and technologies evolve; where required, we provide the software as a cloud service with managed operations.

Solution capabilities

Enterprise-grade solution portfolio aligned to business objectives

ERP

Enterprise resource planning, business support systems

CRM

Customer relationship management and sales enablement

BSS

High-volume online transaction processing, mass billing and revenue assurance

APP

Custom enterprise and end-user applications

DATA

Data platforms and business analytics

AI

AI and large language model solutions

INT

Application and systems integration

OPS

Operations and support and cloud services

A stable foundation for long-term partnership
